

PROVIDING CLEAR RESULTS FOR YOU AND YOUR DOCTOR

Count on RAYUS Radiology to deliver high-quality medical imaging tailored to your unique needs. We take pride in delivering patient-centered care in a comfortable, outpatient setting at costs 30-50% less than hospital-affiliated imaging centers.

WE OFFER

- Free, front-door parking.
- High-quality care at a lower cost than hospital-affiliated imaging centers. Even with a high deductible plan, it's likely your out-of-pocket costs will be less with RAYUS Radiology than what you would pay with a hospital-affiliated imaging center
- Patient advocates who will quickly give you an accurate price quote and answer any of your insurance questions
- Access to your images online at myExamAnswers.com
- Certified technologists and staff members who offer exceptional patient care to help you feel relaxed and at ease
- Results to your doctor within 24 hours
- Specialized radiologists with advanced training in the area of the body that you are having scanned

QUALITY, EXPERIENCE AND CONVENIENCE YOU CAN TRUST

QUALITY

Our dedication to quality is evident in the fact that our centers are American College of Radiology (ACR) accredited, which means our equipment, staff and facilities have been rigorously evaluated by physicists and board-certified physicians.

EXPERIENCE

The team of fellowship-trained radiologists are specialists in their area of care, including neurological, spine, musculoskeletal and body imaging, as well as diagnostic injections and pain management procedures. What does this mean for you? Your studies are being read by a doctor who is a specialist in that area of your body, so you can be confident in an accurate diagnosis. Studies prove that clinical proficiency is improved if a physician specializes in one of these areas.

WE BRING BRILLIANCE TO HEALTH & WELLNESS

SHINE ON

QUALITY CARE YOU DESERVE

BEFORE YOUR EXAM

- Let us know if you are pregnant
- Discuss any special dietary or prescription medication needs with us in advance
- Bring previous films, CDs, and imaging reports of the body part you are having scanned (MRI, CT, Ultrasound, X-ray) and your insurance card
- Call us if you are unable to drive or need to arrange transportation to your appointment
- Arrive 15 minutes before your appointment time to verify registration and provide health information related to your exam

If you are having a diagnostic injection or pain management procedure, we will contact you 24-48 hours prior to your appointment to review additional preparation details.

AFTER YOUR EXAM

- The images are read by a radiologist, a medical doctor who specializes in the specific area of the body you had examined
- Next, the radiologist prepares a diagnostic report to share with your doctor, who will talk with you about the results
- Call your doctor's office if you have questions on next steps or follow-up appointments

fold line

HIGH-FIELD MRI

Magnetic resonance imaging (MRI) combines a powerful magnet with an advanced computer system and radio waves to produce accurate, detailed pictures of organs and tissue to diagnose a variety of medical conditions.

CT

Computed tomography (CT) is a fast, painless diagnostic exam. A CT scan allows the radiologist to see the location, nature and extent of many different diseases or abnormalities inside your body and is excellent for looking at bony anatomy.

X-RAY

An X-ray is a simple, painless procedure to analyze bony structures.

ULTRASOUND

Ultrasound is a simple and safe diagnostic procedure that uses high-frequency sound

fold line

BONE MINERAL DENSITY SCREENING

Quantitative computed tomography (QCT) and dual energy X-ray absorptiometry, known as DXA, exams detect low bone mass (osteopenia and osteoporosis) and helps to monitor patients undergoing drug therapy that can cause low bone mass.

NUCLEAR MEDICINE

Nuclear medicine shows how an organ is working. This allows your provider to monitor cancer, as well as study the activity of many organs (thyroid, heart, stomach and kidneys), bones and joints.

3D MAMMOGRAPHY (TOMOSYNTHESIS)

A 3D mammogram, an X-ray with a safe, low-dose amount of radiation, takes multiple images of each breast, allowing the radiologist to look at the breast tissue in much finer detail than a traditional mammogram.

PET (POSITRON EMISSION TOMOGRAPHY)

PET is a type of nuclear medicine procedure that measures important body functions, such as metabolism. It provides exceptional views of the body, along with organ function, to help guide patient care. It helps doctors evaluate how well organs and tissues are functioning.

IMAGE-GUIDED BIOPSIES

Biopsies are performed under CT or ultrasound guidance by specialized radiologists. RAYUS Radiology will manage the lab processing and provide fast results to your doctor.

DIAGNOSTIC & THERAPEUTIC INJECTIONS

Injections are ordered for diagnosis and/or therapeutic treatment of pain in all areas of the spine, as well as joints. At RAYUS Radiology radiologists specialize in these procedures. Their special focus, combined with our image-guided approach, ensures that your injection is accurate and safe.
